(54) Title: Stacking Column

(57) Abstract: The invention relates to a stacking column for holding warehouse items, in particular bodywork parts, on the support arms (6) of ratchet levers (7.1-7.6), which pivot about a rotational axis (13) from a resting position into a working position. Several ratchet levers (7.1-7.6) are located above one another or next to one another and cooperate with one another. A supporting element (18, 18.1, 18.2), which in the working position lies on or against a preceding ratchet lever (7.1-7.6), rotates with the latter (7.1-7.6).
